

Silt Fence Butterfly Clips

Product Images

Short Description

These silt fence butterfly clips are strong plastic fold over clips which straddle the support wire and lock in over the silt fence fabric to hold fast. They are simple to install and are packed in bags of 200.

Description

Silt fence butterfly clips used to secure silt fence fabric to the top support wire. Silt fence clips are used to secure the silt fence to the guide wire, and their strong fold over shape means they attach securely to the wire, using a series of raised prongs that are jammed into holes as the clip is closed. This means they stick securely and will not detach from the fabric when put under strain. They can be used in conjunction with silt fence accessories and installation tools such as star posts or star pickets, silt fence pins and annealed tie wire.

Silt fence or sediment control fences help prevent soil erosion, flow of sediment in and out of worksites, and stop construction litter from being washed onto verges, roads and green spaces outside the construction zone. Silt fences can be used with wooden stakes, tomato stakes, pegs or star pickets as a support. Properly installed silt fencing gives good protection to the boundary of your work site.
