

Heavy Duty Fencing Brace 33mm to suit concrete feet

Product Images

Short Description

Fencing Brace 33mm to suit concrete block feet

Description

Bracing is an essential part of a sturdy temporary fencing system. It adds an extra element of safety and stability, and ensures your fencing is well balanced and will not topple under light stress such as wind or workers leaning on the fence.

Jaybro's fencing team can provide specialist advice and assistance in calculating the kind of bracing you may need for your site, as well as the quantity.

This heavy duty support is designed to support the 2000 series panels in high wind areas. The heavy duty 33mm brace requires two heavy duty couplers and 2 concrete filled blocks with 34mm holes.

To learn more about when and how to use temporary fence bracing, check out our tips on [temp fence braces](#).
