

Traffic Separator - End Cap Set - Black

Product Images

Short Description

Flexible Traffic Separator End Cap Set - Black.

Traffic separators are a versatile and flexible delineation system - read more in this article detailing [our top 4 ways to use traffic separators](#).

Description

Flexible traffic separator end cap set of 2, for use with Jaybro's flexible traffic separator chevron panels and black & yellow centre modules.

This set of two black end caps forms part of the traffic separator system, perfect for separating lanes and preventing vehicles from entering into an area or changing lanes. It can also be used for tidal flow as a moveable median unit. Reflective posts or panels have a quick release system allowing easy removal/installation. With the addition of horizontal modules and posts or panels, these end caps form part of a highly effective traffic separator system.

Each end cap measures 500mm long x 250mm wide x 80mm high, and easily slots into it's matching horizontal module (sold separately) using a tongue and groove join. The system can be installed in any length, and can be semi-permanently fixed, or just loose laid for temporary situations. End caps provide a tidy finish to the traffic separator system and are also available in yellow.
