
GEOmasta Root Barrier HDPE 1mm x 900mm x 30m

Product Images

Short Description

This Root Barrier system is ideal for controlling root growth in any application, from housing developments to major infrastructure. The durable HDPE membrane is 1 mm in thickness, with a 900 mm width and comes in a 30 meter roll.

Description

Geomasta HDPE Root Barrier. Designed to prevent root damage to footpaths, driveways, retaining walls and other structures.

A smooth continuous, non-ribbed and non-dimpled root barrier control solution. Geomasta products are manufactured for larger application including infrastructure and landscaping projects.

Deployed on projects around Australia and New Zealand to control roots on major civil projects, housing developments and industrial business parks.

This black HDPE membrane root control barrier is 1 mm thick and comes in a 30m roll. It's the most effective solution for controlling invasive tree roots. A durable and lightweight solution for controlling unwanted root moment and growth.

The lightweight properties allow the root barrier to be cut and shaped to suit your requirements. Once in place the barrier creates a long last seal to trap root and moisture. This promotes healthy tree growth without damage to surrounding structures.

The features and benefits of the Geomasta® Root Barrier include:

- Controls the spread of tree roots to unwanted areas
- Retains moisture around the roots
- Promotes healthy tree and plant growth
- 1 mm thickness, black in colour
- Quick and easy to handle and install
- A cost effective solution

Are you looking to prevent damage to walk ways, footpaths, driveways and more from tree roots? Look no further, this product is the ideal solution, call us to discuss your options.
