
Retractable Barrier Bar 2 metres

Product Images

Short Description

Retractable barrier bar - extends up to 2 meters in length. Also known as tiger tail bars.

Description

Barrier bars are a telescopic bar designed to be mounted by placing the ring shaped ends on witches hats. Barrier bars are designed to temporarily isolate areas or direct pedestrians, staff, contractors or vehicles away from hazards or restricted areas.

Barrier bars are easily connected over 2 traffic cones to create a quick and effective portable barrier system that can be extended or decreased in length as required.

Suitable for internal or external use, these highly visible bars extend up to 2 meters and fit all [traffic cones](#) sizes, plus they are extremely durable and lightweight.

Additional Information
