

T-Top Bollard (Bollard Only)

Product Images

Short Description

1150 mm T-top bollard. A fluorescent orange bollard with reflective bands to increase visibility. Jaybro's T-top bollards are the barrier of choice for construction contractors and traffic controllers. **Note the T-top bollard needs to be paired with a base - our [6kg base](#) and [8kg base](#) are sold separately.**

Description

T-Top bollards with reflective tape are commonly used to direct vehicle and pedestrian traffic and mark out unsafe work areas on site. A durable polyethylene moulded bollard, it is designed for harsh Australian & New Zealand work zones, construction sites and civil projects.

Perfect for cordoning off no-go areas, creating exclusion zones and controlling traffic with the addition of [barrier tape](#), [safety flagging](#), and plastic chain.

T Top bollards remain in place with the support of either a 6 kg or 8 kg base. Note that bases are sold separately and additional bases are recommended for windy and high traffic areas. Jaybro's T-top bollards

are the perfect traffic control bollard for civil roadworks and construction projects.

A two-piece design means you're able to add more weight when required. Removing the weighted base makes installing and uninstalling a breeze.

- 1150mm high
- High visibility orange with reflective tape
- Tough polyethylene construction
- Heavyweight rubber base
- Bases available in 6kg or 8kg (sold separately)
- Add more bases for high wind areas
