

Barrier Tape - Non Reflective Red and White

Product Images

Short Description

100m x 75mm red and white non-reflective, standard duty barrier tape. Non adhesive style.

Description

Barricade tape is a visual warning used to restrict access and cordon off areas. Available in red and white, it provides a highly recognizable visual warning. On civil and construction sites, barricade tape is used to notify the general public about ongoing work and the possibility of hazards. Barrier tape in construction environments usually contains a red white colour combination.

This type of barrier tape is regularly found on civil, construction and demolition work sites. Used across Australia and New Zealand on civil work sites and during construction and road work, it acts as a simple barrier to control pedestrian foot traffic and alert low speed vehicle traffic.

Barrier tape is the cheapest and quickest way to erect a temporary barrier. Installation is simple, just attach the barrier tape by wrapping or tying it to almost anything. It's not unusual to see barrier tape tied to machinery after hours, and red and white barrier tape is commonly mounted to traffic cones, T-top bollards and star posts forming an effective visual barrier.

- Measures 100 metres long x 75mm wide
- Non-reflective
- Standard duty
- Non Adhesive style barrier tape
- 24 rolls per box
