

# Wrecking Bar / Crowbar - 750mm

## Product Images

## Short Description

750 mm long wrecking bar, recommended for construction and demolition applications. This handy crow bar will pry, lever and separate items with ease.

## Description

Construction and demolition wrecking bar. This 750 mm large crow bar is designed to make demolition work a breeze. A standard style wrecking bar with a curved claw end and chiselled end for prying.

Wrecking bars are also referred to as crow bars, jimmy bars and pry bars. But, no matter what you call them, wrecking bars are one of the most recognised tools on any construction site.

How do crow bars work?

A crow bar has two distinctive ends. The claw shaped end with its curved design, shaped to provide the greatest leverage. With a V shaped tongue for pulling nails, its built for demolition.

At the other a chiselled profile, suited prying items apart for example pulling up floorboards or opening creates.

The longer length of a demolition pry bar offer better leverage over a smaller claw hammer and reduces user fatigue on larger jobs.
