
Sorbex Oil Absorbent Pad 450 x 500 mm

Product Images

Short Description

Sorbex oil absorbent pad, 450 x 500 mm - sold individually. A high strength spill pad that will absorb up to 2 litres each.

Description

Sorbex oil absorbent pads provide a heavy-duty solution to absorbing oil spills. Each pad will absorb up to 2

litres of oils, preventing further spreading of spills.

Unattended spills can cause serious workplace health and safety issues. Even a small amount of oil spilt on the floor can greatly increase the risk of slips or falls. An employers duty of care means they are obligated to provide a safe workplace free from hazards such as slip risks. Having a spill kit or a simple emergency clean up method such as these oil absorber pads on hand ensures employees can remain safe and free from injury in the workplace. Additionally, oil absorbers can help prevent oils from entering drains and polluting the environment. For larger oil spills a large spill kit should be on hand, but for small puddles these oil pads are an ideal solution.

These high strength oil absorbent pads are ideal for many industries. A component of many spill response kits, these oil pads can also be used to refill a regular spill kit.

If you need information relating to spill kits or kit refill items, please contact our friendly team. Our customer service team have extensive knowledge of spill kit products and requirements.
