Short Description

Ground protecting mat holding pins - single pin to join 2 mats

Description

Keep your ground protection mats from swivelling or moving while being driven over or walked on. Simple pin system. Available for joining 2 mats or 4 mats at once. Mats available separately.

About HDPE Ground Protection Mats

These mats create an instant roadway over virtually any type of terrain including mud, sand, marshy, uneven or soft terrain. They are ideal for protecting valuable turf during landscaping projects and offers a superior alternative to plywood and fibreglass. It will not warp, rot, crack or delaminate, and is constructed from rugged HDPE. Save time & labour getting vehicles and equipment traversed over difficult terrain and avoid potential injuries incurred while dislodging vehicles and equipment from mud. The Jaybro ground protection mat also protects vehicles and equipment from excessive wear and damage due to operating on unstable ground conditions.

Easily handled and laid by two workers, it eliminates the need for expensive cranes. This mat can be laid as two parallel tracks or a single roadway, linked together with metal connections. It is easily cleaned due to a less aggressive lug pattern, and is extremely durable, withstanding vehicle weights up to 80 tonnes.

Tested in extremes of hot and cold climates, it can be used hundreds of times and is guaranteed for 7 years.

- Manufactured using super-strong high density polyethylene plastic (HDPE)
- Chemical, weather and UV resistant
- Each mat has a unique integrated tread pattern moulded onto both sides providing traction and stability for nearly any type of heavy equipment
- Simple to install
- Maintenance free and easy to clean
- Measures 2440 mm x 1100 mm x 12.5 mm
- Weight: 48kg
- Colour: Black

Note: As with all temporary roadway systems, our mats are not suitable for use with steel tracked excavators and their use will result in damage to mats. The area where the mat is placed should be relatively level - large rocks or obstacles must be moved before placing the mats. This mat is not bridge material and should never be used to cross or span large gaps. We suggest indoor storage - if stored outdoors, a protection or cover should be used in order to avoid prolonged exposure to UV rays which may damage the plastic.
