

PORTABOOM Activation Sensor Accessory

Product Images

Short Description

Activation sensor for Portaboom portable boom gate. Use where authorisation at the access point is not required.

Description

The Portaboom Activation Sensor solution is an alternative to the GSM Phone & Key Pad Entry Systems. It is designed to be applied at the sites where authorisation at the access point is not required, for example, as a speed calming device ensuring vehicles are at a stop before entering and exiting the site.

- The boom arm will automatically raise when the activation sensor is activated, enabling a safe and automated entry and exit of site
- The activation sensor is mounted to an entry bollard up to 5 metres from the PORTABOOM® unit with an additional Reflector Bollard positioned opposite up to 4 metres. *Requires Safety Sensor due to auto close function
- Compatible with PORTABOOM® PB2000L
- Is compatible with PORTABOOM® Safety Sensors for Auto Close requirements
- Great for speed calming device and efficient site exit
- Peace of mind for automated access control points
- Easy Installation with included Bollards
